# Zyvor Janus

Customer Documentation Overview

2026-08-29

**Zyvor Janus** is a discrete-event Kubernetes GPU cluster simulator — schedulers, MIG, topology, quotas, gang scheduling, and LLM serving metrics with no physical GPUs required. Operators use the **CLI** and an optional **web console**.

| You want to...               | Open                                |
|------------------------------|-------------------------------------|
| Install and first run        | <a href="#">Getting Started</a>     |
| Learn the console shell      | <a href="#">Using the Dashboard</a> |
| Screen-by-screen UX          | <a href="#">Page-by-page guides</a> |
| Look up any route            | <a href="#">Complete page index</a> |
| Cluster YAML / Forge bundles | <a href="#">Configuration</a>       |
| Ports, auth, systemd         | <a href="#">Admin basics</a>        |
| Multi-step jobs              | <a href="#">Common workflows</a>    |

## Printable PDFs

```
set -a; source scripts/customer-docs/product.env; set +a
code scripts/customer-docs/build-customer-pdfs.mjs
```

Output lands in [pdf/](#).

## Product at a glance

---

```
CLI      → cargo run -p zyvor-janus-cli -- run --config configs/clusters/...yaml
Web UI    → http://<host>:3000
FastAPI   → http://<host>:8080/api/health
Login     → Admin / Admin@321 (override with ZYVOR_JANUS_DASHBOARD *)
```

Never publish lab IPs — use `<host>` .
